

What's new

In Astaro IPsec Client V10.3

This Release

The new release V10.30 of the Astaro IPsec Client offers the following major new features and replaces the Astaro IPsec Client version 10.22:

Internet Connection Test

The Help menu of the Client Monitor offers new capabilities for testing your Internet connection. You can PING a specific IP Address or an Internet Domain Name, and also check to which IP address the Domain Name resolves.

Support for Diffie Hellman Groups 15 and 16

When configuring IKE policies you can now select Diffie Hellman Groups 15 and 16.

Activity Indicator

After clicking on the Connection button within the Client Monitor, you'll see a "spinning wheel throbber" with circulating radial lines on top of the Connection button indicating that the connection is being established.

Automatic Search for Software Updates

After selecting the menu item "Search for Updates" you'll see a new dialog allowing you to configure how often the client should check for new versions (never, daily, weekly, monthly). The check will be performed when starting the Client Monitor.

In addition, "Search Now" can be used for an immediate check.

Please note

Since release 10.22, we have **retired the following features** of the Astaro IPsec Client:

- Connection to 3rd party gateways (except Astaro)
- Integrated Dialing and Wi-Fi support
- Pre-Logon, Logon Options
- Hotspot-Logon
- Integrated dynamic Personal Firewall
- Link-Firewall
- EAP
- IPsec compression
- configurable UDP-encapsulation options
- Budget Manager
- Tips of the day
